Superior exudate management and continuous release of silver
Superior exudate management and continuous release of silver

Infection delays wound healing
Bacteria in chronic wounds represent a significant barrier to faster wound healing\(^1\). The level and type of bacteria as well as the general health of the patient determine to what degree wound healing is influenced.

Biatain Ag “2 in 1” silver dressing
Biatain Ag offers sustained silver release during the entire wear time of the dressing\(^2, 3\). Biatain Ag is based on the Biatain foam technology, which provides superior exudate management\(^4, 5, 6\) and offers high patient comfort due to a soft and flexible foam dressing with bevelled edges\(^7\).

Sustained and controlled silver release
Biatain Ag releases silver ions according to the amount of exudate present in the wound. The more exudate the more silver is released. The release persists for up to 7 days\(^2, 3\). Biatain Ag demonstrates wide spectrum antimicrobial efficacy against bacteria that are commonly present in non-healing wounds\(^3, 8\).

Mode of action

The silver is evenly distributed in the foam. When the dressing is applied, silver is released continuously, depending on the amount of exudate from the wound.

Indications
Biatain Ag foam dressings are indicated for a wide range of exuding wounds, including leg ulcers, pressure ulcers and diabetic foot ulcers with delayed healing due to bacteria, or where there is a risk of infection.

Biatain Ag foam dressings may be used for second-degree burns, donor sites, postoperative wounds and skin abrasions with delayed healing due to bacteria, or where there is a risk of infection.

Biatain Ag foam dressings may reduce odour caused by microorganisms in the wound\(^5, 6\).

Biatain Ag foam dressings may be used for moist wound healing on patients who are in treatment for a local or systemic infection under the discretion of a healthcare professional.

Biatain Ag foam dressings may be used throughout the healing process to provide protection for the indicated types of wounds.

Biatain Ag foam dressings are suitable for use in combination with compression therapy.

Biatain Ag foam filler/cavity is indicated for deep exuding wounds, including leg ulcers, pressure ulcers, non-infected diabetic foot ulcers and acute wounds.

Assortment
The Biatain Ag range offers solutions for most exuding wounds.

Biatain Ag Non-adhesive Foam Dressing
Is a soft and non-adherent foam, suitable even if skin surroundings are fragile or injured.

Biatain Ag Adhesive Foam Dressing / Shapes
Is suitable for wounds where an anatomically shaped dressing is needed.

Biatain Ag is available in the following variants and sizes
